## **Overview**

The IMX-5™ is a 10-DOF sensor module consisting of a triple redundant Inertial Measurement Unit (IMU), magnetometer, and barometer. Data output includes angular rate and linear acceleration. IMU calibration consists of bias, scale factor, cross-axis alignment, gsensitivity, and temperature compensation.

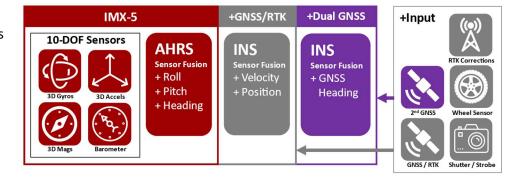

The IMX-5 includes Attitude Heading Reference System (AHRS) sensor fusion to estimate roll, pitch, and heading. Adding GNSS input to the IMX-5 enables the onboard Inertial Navigation System (INS) sensor fusion to estimate roll, pitch, heading, velocity, and position.

The **RUG-INS-5-RTK**™ combines a multi-frequency GNSS receiver with the IMX-5 enabling the Inertial Navigation System (INS) sensor fusion to estimate roll, pitch, heading, velocity, and position.

The **RUG-INS-5-Dual**™ combines two multi-frequency GNSS receivers and the IMX-5 onboard sensor fusion. Dual GNSS heading can be determined in environments that are challenging for a magnetometer.
